Professional Summary

Front End Developer and Software Intern with hands-on experience building responsive web interfaces using HTML, CSS, and JavaScript. Developing React and Next.js proficiency while delivering clean, accessible UI and reusable components. Collaborates effectively in hackathon teams and ships projects to GitHub with clear documentation. Focused on performance, maintainable code, and user-centric design.

Technical Skills

Frontend: HTML, CSS, JavaScript, React (basic), Next.js (basic)

Programming Languages: Python, C, C++, Java

Databases: MySQL, Oracle APEX, MongoDB (basic)

Tools: GitHub, Markdown, Canva, Adobe Photoshop, Overleaf

Experience

Front End Basic Developer

Christ University (AIML, Cyber Security Honours)

Bengaluru, India

2025–Present

- Built and deployed multiple frontend projects using HTML, CSS, and JavaScript, and basic knowledge in front-end frameworks like ; maintained version control and documentation in GitHub.
 - Implemented responsive layouts and reusable UI components, improving cross-device consistency and reducing duplicate code.
 - Collaborated with peers to scope features, estimate effort, and iterate quickly on UI feedback during project sprints.
-

Projects

Ecipheryx — Zero-Knowledge Anti-Deepfake Identity Protocol Project

TechX Hackathon

Overview: Ecipheryx is a privacy-preserving digital identity verification system designed to counter deepfake-based impersonation attacks. It combines zero-knowledge biometric authentication, multi-modal forensic analysis, and blockchain-backed attestations to establish verifiable proof-of-life without exposing raw biometric data.

Core Contributions:

- Built a zero-knowledge biometric flow using MediaPipe FaceMesh and SHA-256 commitments to avoid raw data exposure.
- Developed multi-modal deepfake detection with LLM-orchestrated verdicts (Groq + Llama-3.3-70B) and forensic artifact checks.
- Implemented adaptive liveness challenges with rPPG-based pulse validation and telemetry anomaly monitoring.
- Designed Soulbound Token attestations on Solana and a dashboard to manage on-chain verification states.

Tech Stack: Next.js 15 (App Router), Tailwind CSS, Framer Motion, MediaPipe (FaceMesh/Hands), Groq SDK (Llama-3.3-70B), Solana Web3.js, SPL Token Protocol, Prisma ORM, PostgreSQL, ECC-based Zero-Knowledge Commitments (SHA-256).

Security Architecture: Zero Biometric Retention with client-side processing only; server-side verification via cryptographic attestations; encrypted client-server channels.

Education

B.Tech in Computer Science and Engineering (AIML) <i>Honours in Cyber Security, Christ University, Bengaluru</i> CGPA: 3.46 / 4 (After 3 Semesters)	2024–Present
